

# Accolades for upgrading of treatment plant

Timber treatment in South Africa is to be automated and perfected in the long term,” says Don Hunter, chief executive officer of FFS.

He said at a function at Harding Treated Timbers (HTT) that FFS was already the market leader in providing advice on equipment and technical issues, treatment methods and creosote research.

Roy Armour, managing director of HTT, said the successful upgrading of the creosote treating plant resulted from the total commitment by FFS to help HTT improve the treating process. “I would like to thank FFS for its hard work and financial commitment to upgrading the plant. It is also clear that over the past six months HTT’s customers have been impressed with the quality of treatment and also showed their preference for the use of FFS creosote.”

Pierre Tullis, chief executive officer of the SA Utility Pole Association, was particularly im-pressed with the large

storage facilities, heat exchanger, the logging system, and offloading facilities at the plant. He said FFS deserved credit for its huge effort in helping the industry improve its treatment processes. ■
